Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement Template :

The Automated Network Request Management project in ServiceNow is designed to streamline and automate the handling of network requests across the organization. The current manual approach results in delays, frequent follow-ups, and poor visibility into request progress. By utilizing the ServiceNow service catalog, workflows, approvals, and notifications, users can submit requests through a self-service portal, while the system automatically handles routing, approvals, task allocation, and status tracking. This enhances efficiency, minimizes manual work, and ensures a quicker and more transparent network request management process.

Customer Problem Statement Template

Project: Automated Network Request Management in ServiceNow

Problem Statement (PS-1)	Problem Statement (PS-2)
I am (Employee / End User requesting network services) I'm trying to Submit network requests and receive approvals quickly and efficiently. But The request process is manual and requires repeated follow-ups. Because There is no automated workflow, real-time tracking, or timely notification system. Which makes me feel Frustrated, delayed in completing tasks, and uncertain about request status.	I am (Network Administrator / IT Team Member) I'm trying to Manage and process network requests accurately and on time. But Handling approvals, assignments, and tracking manually increases workload. Because Requests are not automated and communication between teams is inefficient. Which makes me feel Overloaded, less productive, and prone to processing delays.
